

K Home International Launches Major Recruitment Drive

THORNABY-based K Home International (KHI) has today launched an extensive campaign to recruit up to 100 new members of staff as the company experiences unparalleled global demand for its multi-discipline engineering and project management services.

“The current level of activity is making us as busy as we have ever been in the 35 years since we started trading,” said KHI’s CEO Andy Home. “While we have sufficient resources to cope with current levels of demand, projects due to commence in the near future will require us to expand our resources significantly, both in terms of people and facilities.”

KHI’s recruitment drive will seek to attract suitably qualified professionals across a broad range of engineering, project management and construction-related disciplines.

“While a significant volume of new work will come from UK-based customers, we are currently experiencing increasing demand from overseas customers, particularly those in the Middle East,” added Andy.

“We are therefore looking for people to work at our headquarters on Teesside or in our facility located in Dubai.”

KHI remains fully committed to enhancing its support of the UK Process Industry and, in particular, members of the North East Process Industry Cluster (NEPIC). It is currently working with many of the established Teesside operators including Johnson Matthey, GrowHow, Tioxide, Artenius, Invista, Lucite, Yara and Croda. It is predicted that this sector will continue to generate an important proportion of KHI’s future workload.

“In the UK and Europe, we will be undertaking project work in the Pharmaceutical, Chemical, Petrochemical, Aluminium, Renewable Energy and Oil and Gas sectors. In terms of the Middle East, we will be working for customers involved in Oil and Gas, Renewable Energy and Aluminium production,” said KHI’s Operations Director, Ian Pearey.

“In terms of disciplines, our priority is to recruit Electrical, Structural, PDMS, Piping and Instrumentation Engineers and Designers. We are also looking for Civil Engineers, Architects, Safety Engineers (particularly those with Offshore experience), Naval Architects, Project Managers, Estimators, Quantity Surveyors, Construction Managers and Supervisors.”

Much of KHI’s current success can be attributed to the implementation of a clear strategic intent which is to continuously develop and expand its services worldwide including all aspects of Project Management, Design, Procurement and Construction Management.

Comprehensive in-house design and consultancy resources ensure that KHI

provides a wide range of services including Conceptual/ Feasibility Studies, Front End Engineering and Design Assignments through to project implementation, testing and commissioning support.

Flexibility, the development of cost effective solutions, rigorous Quality Management Systems and an excellent track record in Safety, Health and Environmental Integrity are the fundamental values of KHI's business ethos and are just some of the factors behind its success.

K Home International has also developed a robust planning culture. From project conception to completion, it strongly believes that the right level of investment in planning at an early stage of the project development process pays dividends and is the basis of its "no surprises" philosophy.
